

## CLAIMS APPENDIX H

### In the Claims

5 What is claimed is:

Claims 1-49 (Canceled)

Claim 50 (Currently amended) A device capable of holding a plurality of items for display, comprising:

a ~~first~~ front substantially planar member having a front exterior surface and a back interior surface;

a ~~second~~ back substantially planar member having a front interior surface and a back exterior surface;

10 on a surface of at least one planar member, being at least two substantially straight,

smooth and linear, raised, co-planar ribs having a pre-determined thickness

and lying at 90-degree right angles in perpendicular relation to each other,

thereby forming a cross-shaped configuration having a central hub and

extending radially outward therefrom;

15 means for joining said ~~first~~ front and ~~second~~ back substantially planar members wherein

said substantially straight and smooth, linear, raised, co-planar ribs are located

there-between, thereby defining multiple spatial cavities suitable for the introduction

thereinto of at least one display item, and so that an interiorly directed pressure

between said ~~first~~ front and ~~second~~ back substantially planar members

20 is exerted on said at least one display item therein.

Claim 51 (Currently amended) ~~The device capable of holding a plurality of items for display according to~~

~~claim 50, wherein:~~ A device capable of holding a plurality of items for display, comprising:

a ~~first front~~ substantially planar member ~~is made of plastic~~; having a front exterior surface and a back interior surface made of plastic;

a ~~second back~~ substantially planar member ~~is made of plastic~~; having a front interior surface and a back exterior surface made of plastic;

5 ~~said substantially straight, smooth and linear, raised, co-planar ribs~~ are integrally molded

into at least one of the substantially planar members; there being at least two

substantially straight, smooth and linear, raised, co-planar ribs having a

pre-determined thickness and lying at 90-degree right angles in perpendicular

relation to each other, thereby forming a cross-shaped configuration having

10 a central hub and extending radially outward therefrom;

means for joining said ~~first front~~ and ~~second back~~ substantially planar members is using

sonic welding; whereby said substantially straight and smooth, linear, raised,

co-planar ribs are located between said front and back substantially planar members,

thereby defining multiple spatial cavities suitable for the introduction thereinto of

15 at least one display item;

means for the exertion of ~~an~~ interiorly directed pressure between said ~~first front~~ and ~~second~~

~~back~~ substantially planar members is provided by a gradient surface having

the exterior edge of at least one of the substantially planar members forming the

lower edge of the gradient, wherein said surface is positioned to form part of

20 the interior of said defined spatial cavity.

Claim 52 (Cancelled)

Claim 53 (Cancelled)

Claim 54 (Cancelled)

Claim 55 (Currently amended) ~~The device capable of holding a plurality of items for display according to~~

5 ~~claim 50, wherein:~~ A device capable of holding a plurality of items for display, comprising:

~~said first~~ a front substantially planar member ~~is made of translucent plastic; having~~

a front exterior surface and a back interior surface made of translucent plastic;

~~said second~~ a back substantially planar member ~~is made of plastic; having~~

a front interior surface and a back exterior surface made of plastic;

10 ~~said central hub has a hole;~~

on a surface of at least one planar member, there being at least two substantially straight,

smooth and linear, raised, co-planar ribs having a pre-determined thickness

and lying at 90-degree right angles in perpendicular relation to each other,

thereby forming a cross-shaped configuration having a central hub and

15 extending radially outward therefrom, wherein said central hub has a hole;

means for joining said first and second substantially planar members wherein

said substantially straight and smooth, linear, raised, co-planar ribs are located

there-between, thereby defining multiple spatial cavities suitable for the introduction

thereinto of at least one display item, and so that an interiorly directed pressure

20 between said first and second substantially planar members is exerted on

said at least one display item therein;

~~said opposite surface to that having said at least two substantially straight, smooth and linear,  
raised, co-planar ribs has a magnetic element.~~

said exterior surface of said back substantially planar member having a magnet element.

Claim 56 (Withdrawn): The device capable of holding a plurality of items for display according to claim 50,

5 wherein:

a first substantially planar member is made of plastic;

a second substantially planar member is made of plastic;

said substantially straight, smooth and linear, raised co-planar ribs are separate,  
from said first and second substantially planar members;

10 means for joining said first and second substantially planar members is sonic welding;

said central hub has a hole;

means for the exertion of an interiorly directed pressure between said first and second

substantially planar members is an at least partial texturing of the plastic surface

on at least one substantially planar member, wherein said surface is positioned

15 to form part of the interior of said defined spatial cavity.

Claim 57 (Cancelled)

Claim 58 (Cancelled)

Claim 59 (Cancelled)

Claim 60 (Withdrawn): A device capable of holding a plurality of items for display, comprising:

20 a substantially planar member having a front and a back surface;

on a surface of said substantially planar member, at least two substantially straight,

smooth and linear, raised, co-planar ribs having a pre-determined thickness

and lying at 90-degree right angles in perpendicular relation to each other,  
thereby forming a cross-shaped configuration having a central hub and  
extending radially outward therefrom, thereby defining a plurality of sections;  
means for maintaining substantially adjacent contact between said at least one substantially  
5 planar display item, and said surface of said substantially planar member having  
said at least two substantially straight, smooth and linear, raised, co-planar ribs.

Claim 61 (Withdrawn): The device capable of holding a plurality of items for display according to claim 60,  
wherein:

10 said means for maintaining substantially adjacent contact between said at least one substantially  
planar display item and said surface of said substantially planar member having  
said at least two substantially straight, smooth and linear, raised, co-planar ribs is glue.

Claim 62 (Withdrawn): The device capable of holding a plurality of items for display according to claim 61,  
wherein:

15 said glue permits the impermanent re-positionability of said at least one substantially  
planar display item.

Claim 63 (Withdrawn): The device capable of holding a plurality of items for display according to claim 62  
wherein:

20 said re-positionable glue is positioned on said plurality of sections located on said surface  
of said substantially planar member having said at least two substantially straight,  
smooth and linear, raised, co-planar ribs.

Claim 64 (Withdrawn): The device capable of holding a plurality of items for display according to claim 63  
wherein:

said re-positionable glue is covered by a covering material to preserve the efficacy of  
said re-positionable glue until such time as use is effected.

5 Claim 65 (Withdrawn): The device capable of holding a plurality of items for display according to claim 64,  
wherein:

said means for positioning at least one substantially planar display item is re-positionable glue  
located on fold-back flaps affixed to the alternate surface of said substantially planar  
member having said at least two substantially straight, smooth and linear, raised,  
10 co-planar ribs.

Claim 66 (Cancelled)
